

# SANEX

## SANEX, practical and transportable sanitiser

### COMAC SANITIZER

The professional range for sanitizing surfaces and floors quickly and effectively.

SANEX is a compact sanitizer, extremely handy and compact. Ideal for sanitizing and deodorizing rooms and offices in any sector, it can also be used for car interiors and air conditioning ducts.

SANEX is a light and easily transportable equipment. It is very simple to use, just turn on the machine using the appropriate main switch and, by using the dedicated gun, the spray of the solution is simply and effectively directed.

It is a machine that adapts to different needs, in fact, it can be used with sanitizing, disinfectant or deodorant solutions.

Detergents are nebulized to last longer and are evenly distributed in the air of the environment to be treated. In this way all the surfaces that are present in that environment can be reached and sanitised.

The nebulization process in SANEX takes place by colliding the liquid with a high-speed jet of air and a further passage through an orifice that guarantees an accurate decomposition, producing particles of about 8 microns in diameter.

The decomposition of the chemical product into such small dimensions allows the evaporation of the dispensed product, which therefore passes from the liquid to the aeriform state.

In one minute about 30 gr of specific sanitizing product are dispensed.

### MODELS

**SANEX**  
220/230V  
50/60Hz

**SANEX**  
110V  
50/60Hz

## The details that make the difference

Machine internal components are easily accessible for filling the solution and for simple maintenance.  
The machine is equipped with an autonomous air compressor

The exclusive dispensing nozzle is the point where the solution mixes together with the air. This is a key point of the machine, thanks to the choice of a large and easy-to-press lever, SANEX can be used for long shifts without fatigue

The 10m power cable allows you to freely move

The front pivoting wheels guarantee maximum machine maneuverability

The spiral hose connects the machine to the nozzle. Thanks to its spiral shape, when stored it is very compact. Nevertheless, during use it can extend up to 9m to reach spaces that otherwise could be difficult to work

### SOME APPLICATIONS

**Disinfection**  
Hospitals ambients

**Sanitization**  
High traffic areas

**Deodorisation**  
Car interiors

**Sanitization**  
Air conditioners and air conditioning ducts
